

# Honey

Kathy Coleman  
Eclectic Bee Farm

# Is Honey the same as sugar?

Not exactly the bees use enzymes to break down the nectar. That forms Glucose and Fructose.

Does that mean that honey is just another form of Bee Spit?

The nectar does go in the bees mouth. They add special enzymes (amylase, invertase, and diastase). So in reality the bees do add their very special “spit” to the nectar.

# Where does Honey come from?

 The bees grow it.

 The bees find it.

 The bees get honey from flowers.

# Nectar

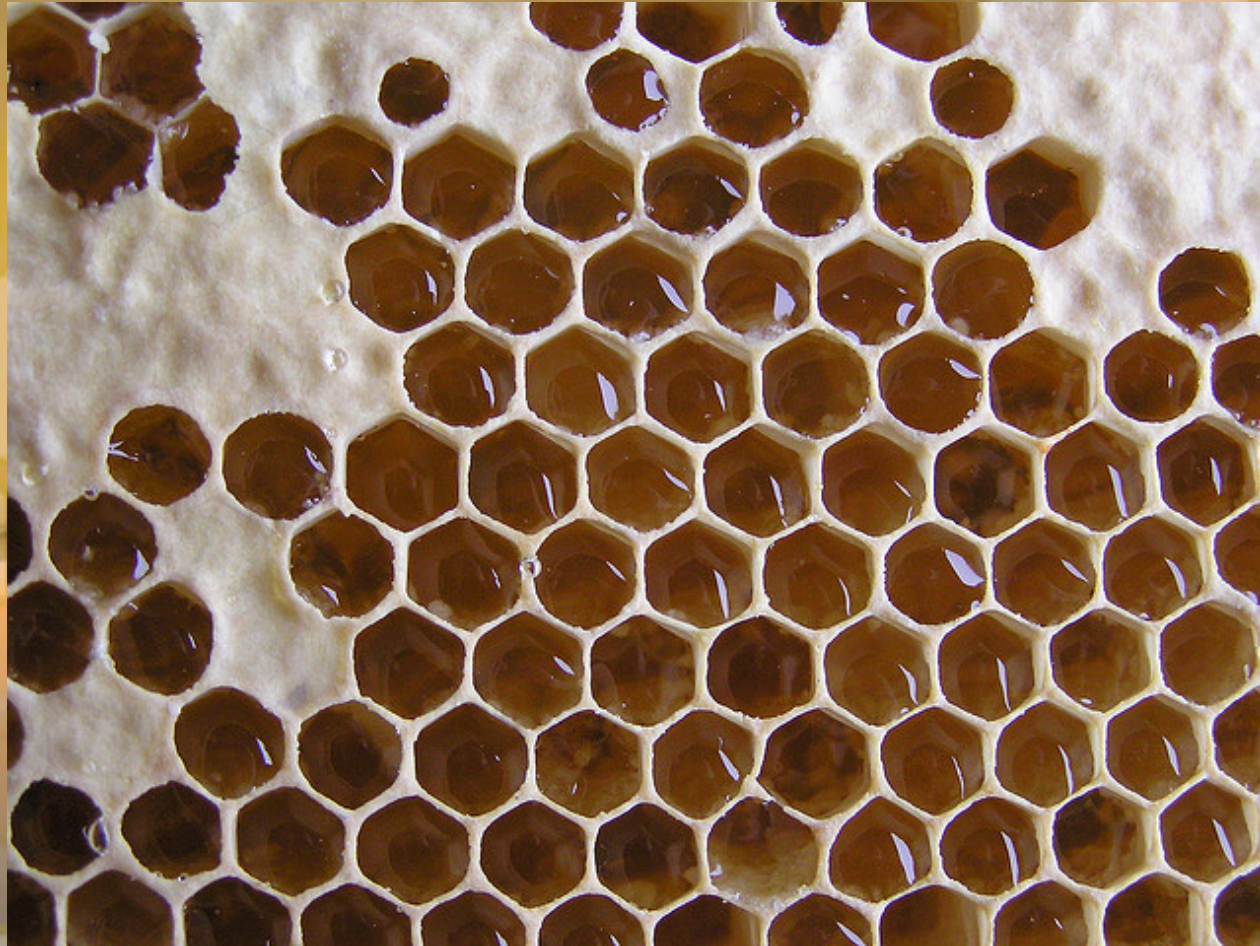

# Honeycomb

How does it go from nectar to honey?

- Dehydration to take the excess water out of the nectar.
- Remember the bee spit. It helps too.

# Capping the Honey

# Different Colors of Honey

Pollen is Multi Color too.

## Tasting Honey

- Not all honeys are created equal.
- Some Sugar
- They all taste very different

What do you think?
